

## Overview

Sifam Controls, a division of Devlin Electronics Ltd, is pleased to provide the 07 series push-on encoder knobs. These are precision engineered components designed for use in audio, lighting and video control applications. With an industry standard 6mm D or splined shaft mechanical fitting the 07 series of encoder knobs are equally suited to use on existing products or design-in on new products.

Precision moulding offers a smooth feel over the full range of travel. Besides a range of standard finishes customers may also specify customised configurations to match existing control interfaces or suit the design of new products. The 07 series push-on encoder knobs are supplied as standard with hard or soft touch finishes.

## Key Features

- Based upon the ever popular Sifam Controls 05 series
- Competitively priced for reduced material cost
- Smooth precision feel for demanding applications
- Hard or soft touch finishes available
- Suitable for Ø6mm D or Ø6mm splined shafts
- Aimed at style and cost conscious equipment manufacturers
- Illuminated and non-illuminated knobs available
